To Whom It May Concern

Dear Sir

Re: Haigh Pettican Ltd

Haigh Pettican Ltd undertook the pre-fabrication and site installation for 4 large AGIs and 2 block valves on the Milford Haven to Brecon 48" Pipeline. The dimensions ranged from dimensions 48" to 1" with wall thickness up to 47mm and material grade up to X80. HPL pre-fabricated the pipework and delivered it to site whereupon the installation was undertaken without any dimensional problems.

All welds were subjected to NDT and quality was to a very high standard.

No adverse Safety or Environmental issues occurred and HPL's attitude to HS and E was very professional.

The Programme became increasingly constrained but due to team endeavour and determination the project was completed within the time schedule to all parties' satisfaction.

Yours faithfully

Nigel Bennett
Senior Project Manager
For and on behalf of National Grid
